

**Chemical Formulae Homework**

Using what you have learned in class, try to work out the formulae for the following compounds. You will have to use everything you have learned so far, and some are a combination of different strategies so be careful!

copper(II) oxide	nickel(II) chloride	vanadium(V) oxide
platinum(II) fluoride	manganese(IV) oxide	chromium(III) bromide
zinc(II) sulfide	iron(II) carbonate	cobalt(III) phosphate
silver(I) hydroxide	mercury(I) sulfate	gold(I) nitrate
